

Analyse for pesticider i vand – Udvidet pakke

Udvidet pesticidpakke

I fortsættelse af udviklingen på miljøområdet, tilbyder ALS Denmark nu en pesticidpakke på mere end 250 stoffer.

Pakken indeholder samtlige parametre, der er omfattet af drikkevandsbekendtgørelsen tillige med forespørgsler fra Miljøstyrelsen og Regionerne samt parametre, der gennem de senere år er efterspurgt af vores faste kundekreds af rådgivere, private virksomheder og forsyninger.

Analysepakken indeholder stoffer inden for grupperne: herbicider, fungicider, insekticider samt nedbrydningsprodukter heraf.

Analyse udføres hos ALS Denmark i Humlebæk, hvor vi benytter det mest moderne og effektive udstyr, der er tilgængeligt på markedet. De fleste stoffer analyseres med en detektionsgrænse på 0,010 µg/l, mens enkelte nyere pesticider leveres med en detektionsgrænse på 0,05 - 0,10 µg/l.
